Subject Index Volume 9

A

Activation boundary size
relation of, to body surface QRS potential sum, 4:345-350

Adrenergic enhancement
effect of, on overdrive excitation, 4:335-343

Alkalosis
alternans of repolarization wave in case of hypochloremic alkalosis with hypopotassemia, 1:75-79

Analogue
mechanism of escape, extrasystolic, and parasystolic arrhythmias. Study on electrical analogue, 3:227-238

Angina pectoris
ventricular reciprocal rhythm occurring in succession in patient with variant angina pectoris, 3:265-271

Angiography
ECG changes in precordial leads during selective coronary angiography, 3:211-214

Angular velocity
of QRS loop of VCG in normal heart, 2:129-132

Animal studies
effects of lidocaine, phenytoin and quinidine on ischemic canine myocardium, 3:203-209
ECG during experimental coronary thrombolysis, 1:41-46
magnitude, direction and location of resultant dipole moment of pig heart, 2:123-128

Annotation
clinical efficacy of truncated exponential decay defibrillator, 3:272-274
low cost ECG cassette tape library, 2:191-192
simple method for routine recording of precordial ECG leads in infants, 4:385-386

Anterior conduction delay
possible cause for prominent anterior QRS forces, 1:15-21

Arrhythmias
chronic accelerated ventricular rhythm, 3:249-254
coexisting ventricular and blocked atrial parasystole, 2:187-189
idioventricular parasystolic rhythms, 4:379-384
mechanism of escape, extrasystolic, and parasystolic arrhythmias. Study on electrical analogue, 3:227-238
tachycardia upon swallowing. Evidence for left atrial automatic focus, 1:69-73

"torsades de pointes" initiated by electrical ventricular stimulation, 3:255-258
unusual mechanism of arrhythmia production, 4:371-373
ventricular, and cardiac hemodynamics in patients with myocardial infarction; comparison of acute and post-hospitalization phases, 4:297-302
wandering atrial pacemaker (prevalence in French hornists), 1:51-52

Atria
comparison of ECG and VCG for diagnosis of left atrial enlargement, 3:215-218
permanent atrial paralysis, 1:81-84

Atrial synchronous pacemaker
pacing techniques in management of supraventricular tachycardias. Part 2, 1:89-96

AV block, *see* Block

Atrio-ventricular node
effects of cold, isotonic glucose infusion on A-V nodal conduction, 1:23-28

B

Bipolar pacing
temporary unipolar pacing using dual cathode, 2:193-197

Block
abnormal patterns and physiological variations in MCGs, 4:398-409
bradycardia-dependent conduction disorders, 1:1-4
congenital or acquired A-V block? 4:394
effect of adrenergic enhancement on overdrive excitation, 4:335-343
left ventricular parietal block: diagnostic and clinical study, 2:139-146
Mobitz II atrioventricular block, due to infra-Hisian block and bundle branch extrasystoles, 2:181-186
reassessment of Q waves in left bundle branch block, 2:109-114
T-wave changes secondary to left anterior hemiblock as shown by study of intermittent and alternating patterns, 2:147-154
Wenckebach-type exit block from ectopic focus as cause of variable coupling, 4:365-370

Bypass grafting
new Q waves after; correlations between graft patency, ventriculogram and surgical venting technique, 4:321-327

C

Calcium
effect of adrenergic enhancement on overdrive excitation, 4:335-343

Cardiac source size
relation of activation boundary size to body surface QRS potential sum, 4:345-350

Case studies
alternans of repolarization wave in case of hypochloremic alkalosis with hypopotassemia, 1:75-79
chronic accelerated ventricular rhythm, 3:249-254
coexisting ventricular and blocked atrial parasystole, 2:187-189
diagnosis of high anterolateral and true posterior myocardial infarction by chest wall ECG-mapping, 4:375-377
effects of pacing site in sinus node reentrant tachycardia, 2:165-169
idioventricular parasystolic rhythms, 4:379-384
junctional premature beat: instructional exercise, 1:85-88
Mobitz II atrioventricular block due to infra-Hisian block and bundle branch extrasystoles, 2:181-186
permanent atrial paralysis, 1:81-84
recurrent tachycardias due to accessory pathway, 3:259-264
right atrial versus left atrial echo zones; proposed new criterion for determining atrial site of retrograde preexcitation, 4:357-363
R-on-T phenomenon during supraventricular tachycardia in childhood, 2:171-174
sinoventricular conduction in atrial standstill, 2:161-164
spontaneous atrial premature depolarizations during paroxysmal reentrant tachycardia, 2:175-180
tachycardia upon swallowing. Evidence for left atrial automatic focus, 1:69-73

"torsades de pointes" initiated by electrical ventricular stimulation, 3:255-258
unusual mechanism of arrhythmia production, 4:371-373
ventricular reciprocal rhythm occurring in succession in patient with variant angina pectoris, 3:265-271
Wenckebach-type exit block from ectopic focus as cause of variable coupling, 4:365-370

Catheterization
vectorial characteristics of ventricular extrasystoles stimulated during cardiac catheterization, 2:103-108

Children
prediction of pulmonary arterial pressures from ECG/VCG data in pediatric patients with rheumatic mitral valve disease, 1:29-34
R-on-T phenomenon during supraventricular tachycardia in childhood, 2:171-174
simple method for routine recording of precordial ECG leads in infants, 4:385-386

Computer
characterization of sinus rhythm, 2:115-122
dynamic mini-computer graphics analysis of long-term electrocardiographic tape recordings, 4:351-356
suggested minimum performance characteristics of data acquisition instrumentation in computer-assisted ECG processing systems, 3:239-247
systems analysis of computerized EKG processing center, 1:59-67

Concealment
junctional premature beat: an instructional exercise in modes of; 1:85-88

Conduction
anterior conduction delay: possible cause for prominent anterior QRS forces, 1:15-21
bradycardia-dependent conduction disorders, 1:1-4
corrected transposition of the great vessels: vectorcardiographic study, 1:5-14
effects of cold isotonic glucose infusion on A-V nodal, 1:23-28
left ventricular parietal block: diagnostic and clinical study, 2:139-146
recurrent tachycardias due to accessory pathway, 3:259-264
sinoventricular conduction in atrial standstill, 2:161-164

D

Defibrillator
clinical efficacy of truncated exponential decay defibrillator, 3:273-274

Depolarization
spontaneous atrial premature depolarization during paroxysmal reentrant tachycardia, 2:175-180
unusual mechanism of arrhythmia production, 4:371-373

Dipole
magnetic field produced by current dipole, 4:409-417
magnitude, direction and location of resultant dipole moment of pig heart, 2:123-128

E

Editorials
bradycardia-dependent conduction disorders, 1:1-4
ECG diagnosis of myocardial infarction in patients with transvenous pacemakers, 2:99-102
future utility of transtelephone pacemaker monitoring, 3:199-202
progress in magnetocardiography, 4:295-296
surgery in Wolff-Parkinson-White syndrome, 4:293-294

Electrical alternans
alternans of repolarization wave in case of hypochloremic alkalosis with hypopotassemia, 1:75-79

Electrocardiogram (ECG)
comparison of ECG and VCG for diagnosis of left atrial enlargement, 3:215-218
concepts of sensitivity, specificity and accuracy in evaluation of ECG, VCG, and PCG criteria, 3:275-281

during experimental coronary thrombolysis, 1:41-46
dynamic mini-computer graphics analysis of long-term ECG tape recordings, 4:351-356
easily applied and removed dry annular suction electrode, 2:155-159
ECG changes in precordial leads during selective coronary angiography, 3:211-214
evidence for local cardiac effects in ECGs from a large electrode array, 1:47-49
low cost ECG cassette tape library, 2:191-192
PCG criteria for myocardial infarction in Chinese men, 4:309-313
simple method for routine recording of precordial ECG leads in infants, 4:385-386
simple procedure for positioning precordial ECG and VCG electrodes using an electrode locator, 1:35-40
suggested minimum performance characteristics of data acquisition computer-assisted ECG processing systems, 3:239-247
systems analysis of computerized EKG processing center, 1:59-67
theoretical considerations on ECG of ventricular hypertrophy, 2:133-138
use of ECG as an aid in screening for left ventricular aneurysm, 1:53-58

Electrode
easily applied and removed dry annular suction electrode, 2:155-159
evidence for local cardiac effects in ECGs from large electrode array, 1:47-49
simple procedure for positioning ECG and VCG electrodes using electrode locator, 1:35-40
temporary unipolar pacing using dual cathode, 2:193-197

Electrogram
precise "on line" measurement of intracardiac, 4:329-333
recurrent tachycardias due to accessory pathway, 3:259-264

Extrasystoles
Mobitz II atrioventricular block due to infra-Hisian block and bundle branch extrasystoles, 2:181-186
vectorial characteristics of ventricular extrasystoles stimulated during cardiac catheterization, 2:103-108

G

Generator
early evaluation of rechargeable pacemaker system, 4:391-393
visual determination of generators of MCGs, 4:426-432

Grafting, *see* Bypass grafting

H

Heart models
effect of torso boundaries on MCGs, 4:418-425
mechanism of escape, extrasystolic and parasystolic arrhythmias, 3:227-238
theoretical considerations on ECG of ventricular hypertrophy, 2:133-138

Hemodynamics
ventricular arrhythmias and cardiac hemodynamics in patients with myocardial infarction. Comparison of acute and post-hospitalization phases, 4:297-302

His bundle electrogram
recurrent tachycardias due to accessory pathway, 3:259-264

Hypertrophy
abnormal patterns and physiological variations in MCGs, 4:398-409
theoretical considerations on ECG of ventricular, 2:133-138

Hypopotassemia
alternans of repolarization wave in case of hypochloremic alkalosis with hypopotassemia, 1:75-79

I

Infusion
effect of cold isotonic glucose infusion on A-V nodal conduction, 1:23-28

Instrumentation
abnormal patterns and physiological variations in MCGs, 4:398-409

clinical efficacy of a truncated exponential defibrillator, 3:273-274
dynamic mini-computer graphics analysis of long-term ECG tape recordings, 4:351-356
easily applied and removed dry annular suction electrode, 2:155-159
future utility of transtelephone pacemaker monitoring 3:199-202
normal and abnormal function of pacemaker magnetic reed switch, 3:283-292
precise "on line" measurement of intracardiac electrograms, 4:329-333
simple procedure for positioning precordial ECG and VCG electrodes using an electrode locator, 1:35-40
suggested minimum performance characteristics of data acquisition instrumentation in computer-assisted ECG processing systems, 3:239-247
systems analysis of computerized EKG processing center, 1:59-67

Internodal pathway
sinoventricular conduction in atrial standstill, 2:161-164

Inverse solutions
magnetic field produced by current dipole, 4:409-417
visual determination of generators of MCG 4:426-432

Ischemia
effects of lidocaine, phenytoin and quinidine on ischemic canine myocardium, 3:203-209

J

Junctional premature beat
instructional exercise in modes of concealment, 1:85-88

L

Left atrial enlargement
ECG changes in precordial leads during selective coronary angiography, 3:211-214
comparison of ECG and VCG for diagnosis of, 3:215-218

Left ventricular parietal block
diagnostic and clinical study, 2:139-146

Library
low cost ECG cassette tape, 2:191-192

Lidocaine
effects of lidocaine, phenytoin and quinidine on ischemic canine myocardium, 2:203-209

M

Magnetic reed switch
normal and abnormal function of pacemaker magnetic reed switch, 3:283-292

Magnetocardiogram (MCG)
abnormal patterns and physiological variations in, 4:398-409
effect of torso boundaries on, 4:418-425
magnetic field produced by current dipole, 4:409-417
visual determination of generators of MCG, 4:426-432

Mapping
abnormal patterns and physiological variations in MCGs, 4:398-409
diagnosis of high anterolateral and true posterior myocardial infarction by chest wall ECG-mapping, 4:375-377
precordial ST-segment mapping. 4. Experience with mapping of ST-segment depression in anterior transmural myocardial infarction, 4:315-320
visual determination of generators of MCG, 4:426-432

Musicians
wandering atrial pacemaker (prevalence in French hornists), 1:51-52

Myocardial infarction (MI)
abnormal patterns and physiological variations in MCGs, 4:398-409
correlation of PCG criteria for myocardial infarction with arteriographic and ventriculographic findings, 3:219-226
diagnosis of high anterolateral and true posterior myocardial infarction by chest wall ECG-mapping, 4:375-377

ECG diagnosis of myocardial infarction in patients with transvenous pacemakers, 2:99-102
PCG criteria for myocardial infarction in Chinese men, 4:309-313
precordial ST-segment mapping. 4. Experience with mapping of ST-segment depression in anterior transmural, 4:315-320
primary ST and T wave abnormalities in diagnosis of acute anterior myocardial infarction during permanent ventricular pacing, 4:387-390
reassessment of Q waves in left bundle branch block, 2:109-114
ventricular arrhythmias and cardiac hemodynamics in patients with myocardial infarction; comparison of acute and post-hospitalization phases, 4:297-302

O

Oscilloscope, digital
precise "on line" measurement of intracardiac electrograms, 4:329-333

Overdrive excitation
effect of adrenergic enhancement on, 4:335-343

P

Pacemakers
early evaluation of a rechargeable pacemaker system, 4:391-393
ECG diagnosis of myocardial infarction in patients with transvenous, 2:99-102
future utility of transtelephone pacemaker monitoring, 3:199-202
idioventricular parasystolic rhythms, 4:379-384
normal and abnormal function of pacemaker magnetic reed switch, 3:282-292

Pacing
effects of pacing site in sinus node reentrant tachycardia, 2:165-169
primary ST and T wave abnormalities in diagnosis of acute anterior myocardial infarction during permanent ventricular pacing, 4:387-390
temporary unipolar pacing using dual cathode, 2:193-197
"torsades de pointes" initiated by electrical ventricular stimulation, 3:255-258
pacing techniques in management of supraventricular tachy cardias. Part 2, 1:89-96

Parasystole
chronic accelerated ventricular rhythm, 3:249-254
coexisting ventricular and blocked atrial parasystole, 2:187-189

Phenytoin
effects of lidocaine, phenytoin and quinidine on ischemic canine myocardium, 3:203-209

Physics
magnetic field produced by current dipole, 4:409-417

Polarcardiogram (PCG)
concepts of sensitivity, specificity and accuracy in evaluation of ECG, VCG and PCG criteria, 3:275-281
correlation of PCG criteria for myocardial infarction with arteriographic and ventriculographic findings, 3:219-226
PCG criteria for myocardial infarction in Chinese men, 4:309-313
PCG sensitivity and specificity, 4:394

Postural changes
differences between supine and sitting Frank-lead ECGs, 4:303-308

Preexcitation
right atrial versus left atrial echo zones: a proposed new criterion for determining atrial site of retrograde preexcitation, 4:357-363

Pulmonary arterial pressures
prediction of, from ECG/VCG data in pediatric patients with rheumatic mitral valve disease, 1:29-34

Q

Quinidine
effects of lidocaine, phenytoin and quini-

dine on ischemic canine myocardium, 3:203-209

QRS
angular velocity of QRS loop in VCG in normal heart, 2:129-132
anterior conduction delay: possible cause for prominent anterior QRS forces, 1:15-21
left ventricular parietal block: diagnostic and clinical study, 2:139-146
relation of activation boundary size to body surface QRS potential sum, 4:345-350

Q waves
reassessment of, in left bundle branch block, 2:109-144
new, after bypass grafting, 4:321-327

R

Rheumatic mitral valve disease
prediction of pulmonary arterial pressures from ECG/VCG data in pediatric patients with, 1:29-34

Rhythm
computer characterization of sinus rhythm, 2:115-122
sinoventricular conduction in atrial standstill, 2:161-164
ventricular reciprocal rhythm occurring in patient with variant angina pectoris, 3:265-271

R-on-T phenomenon
during supraventricular tachycardia in childhood, 2:171-174

S

Sinus node
effects of pacing site in sinus node reentrant tachycardia, 2:165-169

Sinus rhythm
computer characterization of, 2:115-122
permanent atrial paralysis, 1:81-84

Stress testing
differences between supine and sitting Frank-lead ECGs, 4:303-308

ST segment
elevation
use of ECG as aid in screening for left ventricular aneurysm, 1:53-58
mapping
diagnosis of high anterolateral and true posterior myocardial infarction of chest wall ECG-mapping, 4:375-377
precordial ST-segment mapping. 4. Experience with mapping of ST-segment depression in anterior transmural myocardial infarction, 4:315-320

Sudden death
R-on-T phenomenon during supraventricular tachycardia in childhood, 2:171-174

Supraventricular tachycardia, *See* Tachycardia

Surgery
in the Wolff-Parkinson-White syndrome, 4:293-294
new Q waves after bypass grafting: correlations between graft patency, ventriculogram and surgical venting technique, 4:321-327

Swallowing
tachycardia upon. Evidence for left atrial automatic focus, 1:69-73

T

Tachycardia
effects of pacing site in sinus node reentrant tachycardia, 2:165-169
pacing techniques in management of supraventricular tachycardias. Part 2, 1:89-96
recurrent tachycardias due to accessory pathway, 3:259-264
right atrial versus left atrial echo zones: proposed new criterion for determining atrial site of retrograde preexcitation, 4:357-363
R-on-T phenomenon during supraventricular tachycardia in childhood, 2:171-174
spontaneous atrial premature depolariza-

tions during paroxysmal reentrant tachycardia, 2:175-180
upon swallowing. Evidence for left atrial automatic focus, 1:69-73

Thrombolysis
ECG during experimental coronary thrombolysis, 1:41-46

Torsades de pointes
initiated by electrical ventricular stimulation, 3:255-258

Torso models
effect of torso boundaries on MCG, 4:418-425

U

Unipolar pacing
temporary unipolar pacing using dual cathode, 2:193-197

V

Vectorcardiogram (VCG)
angular velocity of QRS loop of VCG in normal heart, 2:129-132
comparison of ECG and VCG for diagnosis of left atrial enlargement, 3:215-218
concepts of sensitivity, specificity and accuracy in evaluation of ECG, VCG and PCG criteria, 3:275-281
evidence for local cardiac effects in ECGs from large electrode array, 1:47-49
corrected transposition of great vessels: vectorcardiographic study, 1:5-14
left ventricular parietal block: diagnostic and clinical study, 2:139-146
magnitude, direction and location of resultant dipole moment of pig heart, 2:123-128
simple procedure for positioning ECG and VCG electrodes using an electrode locator, 1:35-40
vectorial characteristics of ventricular extrasystoles stimulated during cardiac catheterization, 2:103-108

Venting technique
new Q waves after bypass grafting: correlations between graft patency, ventriculogram and surgical venting technique, 4:321-327

Ventricular aneurysm
use of ECG as aid in screening for left ventricular aneurysm, 1:53-58

Ventricular extrasystoles
vectorial characteristics of, stimulated during cardiac catheterization, 2:103-108

Ventricular premature beats
Wenckebach-type exit block from ectopic focus as cause of variable coupling, 4:365-370

Ventricular rhythm
chronic accelerated, 3:249-254
ventricular reciprocal rhythm occurring succession in patient with varient angina pectoris, 3:265-271

Vessels
corrected transposition of great vessels: VCG study, 1:5-14

W

Wandering atrial pacemaker
(prevalence in French hornists), 1:51-52

Waves
primary ST and T wave abnormalities in diagnosis of acute anterior myocardial infarction during permanent ventricular pacing, 4:387-390
T-wave changes secondary to left anterior hemiblock as shown by study of intermittent and alternating patterns, 2:147-154

Weight reduction
abnormal patterns and physiological variations in MCGs, 4:398-409

Wenckebach AV block, *see* Block

Wolff-Parkinson-White syndrome
surgery in, 4:293-294
